

We are people .

We live on the Earth .

Sometimes it is too cool on the
Earth, and our bodies get cold.

The earth has heat
coming from the SUN.

It can keep us WARM.

Sometimes it is too WARM on the Earth,
and our bodies get HOT.

If we go into the Earth, it can
be COOLER. Deep in the
earth, the temperature is not
heated by the SUN.

If we understand the Earth and the SUN, we can stay happy and comfortable on the Earth . We can make homes that understand the Earth and the SUN . There will be no need to hurt the Earth trying to get fuel for our stoves and air conditioners . The Earth and the SUN will take care of us and we will learn to respect and appreciate them .

The Earth can give us comfort . Comfortable shelter is one of our needs .

Our bodies are mostly water.

We always need water.

Water comes from the sky on the Earth .
The Earth gives us Water . It is RAIN.

Water is one of our needs .

Our bodies use food to make energy to
keep us alive and active. We eat food.

The Earth grows food for us.
We can help the Earth grow food.

Food is one of our needs.

Our bodies make human waste from the parts of the food that we do not need.
We use a toilet to get rid of this waste.

The Earth has a way of turning this human waste back into soil to grow more FOOD.
If we understand this process, we can help the Earth do this.
Containing and transforming our human waste is one of our needs.

We have invented many things that use electricity. We have lights, computers, cell phones, TVs and more.

We must have electricity for our daily lives.

The energy from the SUN and the WIND can be transformed into electricity . We can work with the Earth to make our own electricity . Electricity is one of our needs .

A lot of the things we do in our daily lives result in left-over products that we do not use or want .
Bottles, cans, tires, cardboard and many more products are left over from our daily lives .
We call these products GARBAGE.

If we can figure out a way to
use these products they are
no longer GARBAGE .

The Earth has no GARBAGE . People created GARBAGE .
Having a way of dealing with our GARBAGE is one of our needs .

So..

We have six needs that must be met
in order to have a life on Earth.

1_ Comfortable shelter .

2_ Water .

3_ Food.

4_ Treatment of human waste .

5_ Electricity .

6_ Treatment of Garbage .

If we were traveling on a ship at sea,
that ship would have to take care of
all these needs .

If we were traveling on a ship in space,
that ship would have to take care of all
these needs .

In either case we would have to help the
ship take care our six basic needs .

We live on the Earth, we need a ship to live in on the Earth. We need an Earthship. We can help our Earthship take care of us. This means we need to understand the Earth much better than we do now.

We need to understand that when the sun is high in the sky we usually need to stay cool so we make our Earthship block the high sun. This is true of most places on the Earth; The high sun must be blocked.
